

## **Advarra Training Services**

## Training end users on clinical research technology can be challenging

According to a 2019 survey conducted by Advarra and ACRP, fewer than half of respondents agreed that their organization had a training program that set them up for success. Additionally, one in four respondents said they did not receive adequate initial training on clinical research technologies.

Clinical research organizations often lack adequate dedicated training resources. Trainers can struggle with the amount of time and effort it takes to offer software training to a large number of users that is both relevant to their role, and in line with organizational policies.

## Leverage Advarra's Training Services to bring expert knowledge to your organization

With your Advarra solutions, your organization has immediate access to:

Learning Management System with eLearning modules, recorded webinars, and educational videos

Downloadable and customizable training manuals

Learning Portal wiki documentation for each Advarra solution

Onsemble.net Exchange to share and receive training documentation from other institutions

Release notes and upgrade training for every new version of your Advarra solutions

Core team product training during implementation

## Advarra's Training Services can also tailor training materials to your institution's unique requirements:

## Curriculum Design

Develop an end user training strategy

## **Training Documentation**

Write and update training manuals or reference guides

## **Environment Setup**

Populate a training environment with sample data and users

## **Classroom Facilitation**

Provide expert training for your team on-site

## **Web-based Training**

Build strategies for delivering effective web-based training

## **Blended Learning**

Get creative with alternative training strategies and tools

## **Learning Management System**

Deliver and track online training and assessments

# New Version and Upgrade Prep

Analyze and update your current training environment and documentation to include new features

## **Advanced Functionality**

Generate ideas for expanding your footprint and rolling out more features to users

## **Tip Sheets and User Guides**

Develop and update end user training materials

## eLearning and Videos

Record and edit short training videos and eLearning modules

#### **Assessments**

Design and conduct end user assessments

## Screenshots and Visuals

Create annotated screenshots or slides to illustrate concepts and processes

#### Train the Trainer

Coach your classroom facilitators and instructional designers
